

March 4, 1965

United States Government,
Washington, D. C.

Dear Sir:

Corning Glass Works wishes to submit the enclosed proposal in response to "Development Objectives, Improved Screen for Rear Projection Viewers", dated March 17, 1964.

Since this problem relates to the transmission and diffusion of light, it is felt that the Company's long experience in optical technology as a supplier of optical glass and lighting ware will serve as an excellent background.

The work will be performed in the Electro-Optics Group of the Electronic Research Laboratory in Raleigh, N. C. It is estimated to require fifteen months and will cost [redacted] This is a problem area that is of great interest to this group and an excellent job will be done.

Corning Glass Works will grant to the United States Government a license to use, or to have used for governmental purposes, any inventions that may be made in the course of the work on the subject proposal. No license or other rights will be granted expressly or by implication under any existing patents, patent applications, or background inventions owned by Corning Glass Works, nor will Corning supply any background data.

We hope that the proposal expresses clearly our interest in the project and our qualifications to work in this field. Please contact the writer if additional information is required.
